[illegible]

11. H^+ is negligible in strong
 acids (like HCl) in the
 conjugate's water. For weak
 acids, $\text{pH} < \text{pK}_a$, H^+ is
 still negligible. $\text{pH} > \text{pK}_a$
 then, the conjugate is negligible
 and H^+ is negligible. If $\text{pH} = \text{pK}_a$,
 neither is negligible.

KEY WEST, FLORIDA

Key West has always felt a bit rowdy and rough around the edges—which might explain why avowed man's man Ernest Hemingway called the island home for a decade. A much-needed shot of style arrived last month in the form of the Gates Hotel, which boasts

midcentury modern cool: Balinese petrified wood tables, a lobby accent wall made of pecky cypress and custom blue bikes by Brazilian designer Lorenzo Martone. Named in honor of the island's rum-running days, the poolside Rum Row bar sources spirits from the nearby Key West First Legal Rum Distillery. Cocktails pair perfectly with "conch fusion" tapas from the on-site Blind Pig food truck (a nod to the Prohibition-era nickname for a speakeasy) or a hand-rolled stogie from the family-owned Rodriguez Cigar Factory.
